

## VERTICAL PALLET CONVEYOR

### VERTICAL PALLET CONVEYOR

This conveyor is unique because it handles parts in a vertical position. Unlike conventional conveyors, the part rides on the tooling around the outside of the conveyor instead of the top of the conveyor. This feature allows easy side access to the work parts for a Manual Load/Unload condition or for a Robot or Gantry interface. Available as Accumulating or Indexing, the Vertical Pallet Conveyor could be the perfect conveyor for your application. It can be used as a buffer for your parts or directly feed or takeaway parts from a production line.

### AVAILABLE FEATURES
