

ACCUMULATING ZONE ROLLER CONVEYOR

ACCUMULATING ZONE ROLLER CONVEYOR

The Accumulating Zone Roller Conveyor was developed to allow parts to accumulate without any part-to-part contact. In other types of accumulating conveyors, pallets are required to keep parts from touching each other. Problems such as nicking and scratching finished parts are virtually eliminated with the Accumulating Zone Roller Conveyor. Individual driven zones control the speed and placement of each part within the zone, as parts clear out of one zone the adjacent zone powers the part into the empty zone. Safety is also an important role of the Accumulating Zone Roller Conveyor, as this conveyor does not allow parts to contact each other thus eliminating part on part pinch points. This conveyor comes with a variety of styles such as straight sections, curves, powered carts, swing gates, turntables and removable in-line sections.

AVAILABLE FEATURES

Construction:

- Steel Legs
- Aluminum Side Bars

Conveyor Drive:

- Electric fractional horsepower motors for each zone
- Direct Drive Rollers

Part Types:

- Cylinder Blocks, Cylinder Heads, or any Flat Part or Pallet

Conveyor Length:

- Can be designed to any length

Conveyor Speed:

- 150 mm (6 inches) per second. Other speeds available upon request

Controls:

- P.C. or your preference

Accessory Equipment:

- Orientation Devices, Rotate Stations, Curve Sections, Turntables, Rollovers, Swing Gates
